

MySQL – Task No. 2

Database: Capgemini

Table name: Employee

id	name	profile	email	salary	age	experience
1	rani	dev	rani@gmail.com	11000	43	27
2	raj	test	raj@gmail.com	21000	33	17
3	radha	test	radha@gmail.com	26000	38	21
4	raj	dev	raj12@gmail.com	51000	32	12
5	john	dev	john@gmail.com	51000	39	27

- **CREATE TABLE:**

CREATE TABLE employees(id INT, name varchar(20),profile varchar(10), email varchar(30), salary DOUBLE, age INT, experience INT);

- **INSERT VALUES INTO THE TABLE:**

```
mysql> insert into employees VALUES (1,"rani","dev","rani@gmail.com",11000,43,27);
Query OK, 1 row affected (0.01 sec)

mysql> insert into employees VALUES (2,"raj","test","raj@gmail.com",21000,33, 17);
Query OK, 1 row affected (0.01 sec)

mysql> insert into employees VALUES (3,"radha","test","radha@gmail.com",26000,38, 21);
Query OK, 1 row affected (0.01 sec)

mysql> insert into employees VALUES (4,"raj","dev","raj12@gmail.com",51000,32, 12);
Query OK, 1 row affected (0.01 sec)

mysql> insert into employees VALUES (5,"john","dev","john@gmail.com",51000,39, 27);
Query OK, 1 row affected (0.01 sec)
```

Q.1: As a user, I want to add an column branch location so I can efficiently search the branch wise record.

```
mysql> ALTER table employees ADD column(branch_location varchar(30));
Query OK, 0 rows affected (0.03 sec)
Records: 0 Duplicates: 0 Warnings: 0
```

- Table after adding column:

```
mysql> select * from employees;
+-----+-----+-----+-----+-----+-----+-----+
| id | name | profile | email | salary | age | experience | branch_location |
+-----+-----+-----+-----+-----+-----+-----+
| 1 | rani | dev | rani@gmail.com | 11000 | 43 | 27 | NULL |
| 2 | raj | test | raj@gmail.com | 21000 | 33 | 17 | NULL |
| 3 | radha | test | radha@gmail.com | 26000 | 38 | 21 | NULL |
| 4 | raj | dev | raj12@gmail.com | 51000 | 32 | 12 | NULL |
| 5 | john | dev | john@gmail.com | 51000 | 39 | 27 | NULL |
+-----+-----+-----+-----+-----+-----+-----+
5 rows in set (0.00 sec)
```

Q.2: As a user, I want to check the total salary expenses on employees.

```
mysql> select sum(salary) from employees;
+-----+
| sum(salary) |
+-----+
| 160000 |
+-----+
1 row in set (0.00 sec)
```

```
mysql> select count(*) from employees;
+-----+
| count(*) |
+-----+
| 5 |
+-----+
1 row in set (0.02 sec)
```

Q.8: As a user I want to see those employee names who are from test profile and having salary more than 25K.

```
mysql> select name from employees where profile = "test" AND salary > 25000;
+-----+
| name |
+-----+
| radha |
+-----+
1 row in set (0.00 sec)
```

Q.9: As a user, I want to shift Radha on support profile.

```
mysql> UPDATE employees SET profile = "support" where name = "radha";
Query OK, 1 row affected (0.01 sec)
Rows matched: 1 Changed: 1 Warnings: 0

mysql> select * from employees where name = "radha";
+-----+-----+-----+-----+-----+-----+-----+
| id | name | profile | email | salary | age | experience |
+-----+-----+-----+-----+-----+-----+-----+
| 3 | radha | support | radha@gmail.com | 26000 | 38 | 21 |
+-----+-----+-----+-----+-----+-----+-----+
1 row in set (0.00 sec)
```

Q.10: As a user, I want to get the second highest salary of employee.

```
mysql> select max(salary) from employees WHERE salary < (select max(salary) from employees);
+-----+
| max(salary) |
+-----+
| 26000 |
+-----+
1 row in set (0.01 sec)
```

Q.11: As a user I want to get the second lowest salary of employee.

```
mysql> select min(salary) from employees WHERE salary > (select min(salary) from employees);
+-----+
| min(salary) |
+-----+
|      21000 |
+-----+
1 row in set (0.00 sec)
```

Q.12: As a user, I want to calculate the average salary of employees those are belongs to dev profile.

```
mysql> select avg(salary) from employees WHERE profile = "dev";
+-----+
| avg(salary) |
+-----+
| 37666.666666666664 |
+-----+
1 row in set (0.01 sec)
```

Q.13: As a user, I want to see the employee's name and salary who is having lowest experience.

```
mysql> select name, salary from employees WHERE experience = (select min(experience) from employees);
+-----+-----+
| name | salary |
+-----+-----+
| raj  | 51000 |
+-----+-----+
1 row in set (0.00 sec)
```

Q.14: As a user, I want to see the employee name who is having lowest age with max salary.

```
mysql> select name from employees where age = (select min(age) from employees) ORDER BY (salary) DESC LIMIT 1;
+-----+
| name |
+-----+
| raj  |
+-----+
1 row in set (0.00 sec)
```

Q.15: As a user, I want to remove all the employee from company.

```
mysql> truncate employees;  
Query OK, 0 rows affected (0.04 sec)
```

```
mysql> select * from employees;  
Empty set (0.00 sec)
```

```
mysql> desc employees;
```
